INTRODUCTION ABOUT GRAPES

Grapes are a type of fruit that grow in clusters of 15 to 300, and can be crimson, black, dark blue, yellow, green, orange, and pink. "White" grapes are actually green in color, and are evolutionarily derived from the purple grape. Mutations in two regulatory genes of white grapes turn off production of anthocyanins, which are responsible for the color of purple grapes. Anthocyanins and other pigment chemicals of the larger family of polyphenols in purple grapes are responsible for the varying shades of purple in red wines. Grapes are typically an ellipsoid shape resembling a prolate spheroid.

According to the USDA GAIN report, grapevines are among the most suitable fruit crops for sandy soils and newly reclaimed land, as well as for the older Egyptian land traditionally farmed next to the Nile river. For this reason, cultivated areas of table grapes exist across the country.

SECTION (3): EXPORTS POTENTIAL AND TARGET MARKETS FOR GRAPES (HS CODE: 080610)

METHODOLOGY:

EXPORT POTENTIAL MAP:

Export Potential map is a strategic tool used by International Trade Centre (ITC) to identify market opportunities and investment resources where they will have the greatest return in the long run. Market potential analysis is not used for short-term forecasting, but can help to target markets with high growth potential in the future. Market potential analysis enables governments and companies to:

- Categorize countries as lead markets, break-out markets or emerging markets.
- Quantify market potential for a given product by country, region or globally, now and in the future.
- Identify growth drivers and barriers in those markets.
- Understand how to exploit growth markets by tailoring marketing, product development and production strategies to meet customer demands and overcome market barriers.

ECONOMIC OVERVIEW:

The UK, a leading trading power and financial center, is the third largest economy in Europe after Germany and France. Agriculture is intensive, highly mechanized, and efficient by European standards, producing about 60% of food needs with less than 2% of the labor force. The UK has large coal, natural gas, and oil resources, but its oil and natural gas reserves are declining; the UK has been a net importer of energy since 2005. Services, particularly banking, insurance, and business services, are key drivers of British GDP growth. Manufacturing, meanwhile, has declined in importance but still accounts for about 10% of economic output.

In 2008, the global financial crisis hit the economy particularly hard, due to the importance of its financial sector. Falling home prices, high consumer debt, and the global economic slowdown compounded the UK's economic problems, pushing the economy into recession in the latter half of 2008 and prompting the then BROWN (Labour) government to implement a number of measures to stimulate the economy and stabilize the financial markets. Facing burgeoning public deficits and debt levels, in 2010 the then CAMERON-led coalition government (between Conservatives and Liberal Democrats) initiated an austerity program, which has continued under the Conservative government. However, the deficit still remains one of the highest in the G7, standing at 3.6% of GDP as of 2017, and the UK has pledged to lower its corporation tax from 20% to 17% by 2020. The UK had a debt burden of 90.4% GDP at the end of 2017.

The UK economy has begun to slow since the referendum vote to leave the EU in June 2016. A sustained depreciation of the British pound has increased consumer and producer prices, weighing on consumer spending without spurring a meaningful increase in exports. The UK has an extensive trade relationship with other EU members through its single market membership, and economic observers have warned the exit will jeopardize its position as the central location for European financial services. The UK is slated to leave the EU at the end of January 2020.
